Release Notes	

Change Log

Date	Who	Description
31 Jul 2026	Lois Elliott	Added unique numbering for each feature section to allow for easy reference.

Feature 1: Upgrading Reports with Saved Filters: Scope and High-Level Features

Standards

- Default behavior for modals/prompts: Clicking outside the modal does not close the modal.
- GA click tracking: Unique class names added to all buttons and links to enable GA click tracking using the agreed naming convention
- Datadog logs: Relevant Datadog logs added for all actions / API calls with the correct level to aim troubleshooting and debugging.
- User Concurrency: The current pattern is last saved wins.

- Standard behavior for Advanced Search Filters: There is no validation for filter values being required; if the values are not selected, the filter is removed when the filter button is clicked.
- Standard behavior for Advanced Search Query String Parameters: The query string parameters are updated when the Search or Apply Filters button is clicked.
- Standard behavior for Advanced Search URLs: Advanced Search queries can currently be bookmarked because the query string parameters contain the search and filter criteria. When an existing query URL is loaded, the search term, filters, and results are loaded. This functionality must remain.

Assumptions

- Unless otherwise specified, “user” refers to all Employees regardless of their role (Admin, Manager, Tech)
- Unless otherwise specified, Advanced Search and Filters are available to all users regardless of their plan.
- Unless otherwise specified, it applies only to Desktop.
- Unless otherwise specified, both light and dark modes must be supported.
- Only additions to the existing functionality are included here; existing functionality must continue to work as expected.

In-Scope Features

F1.1 Saving Advanced Search Queries as Saved Filters

User Story

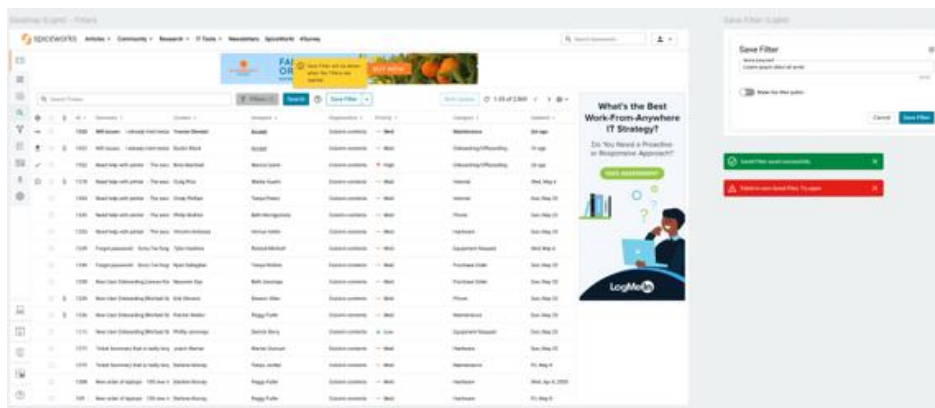

- As a CHD user, I want to save my Advanced Search queries as private or public Saved Filters, so I or others can reuse them later.

Acceptance Criteria

- On the Advanced Search page for Desktop only, add a Save button
 - The save button is enabled only when the user has applied search or filter criteria.
 - When the user clicks the save button, a modal appears
 - Name (text string max length 50 characters)
 - Public (toggle default no)
 - Buttons: Cancel, Save Filter
 - Validation Requirements
 - The name field must be unique within the context of the CHD account
 - Trim any leading or trailing white space characters before testing for uniqueness
 - Validation Message: Saved Filter name must be unique.
 - The name field must be populated (min = 1, max = 50)

- Validation Message: Saved Filter name is required.
- Save Filter Button
 - The Save Filter button is only enabled when the validation requirements are met.
- When the user clicks Save Filter
 - Save the text search term and filter information to the database, along with
 - Created Datetime
 - Created by
 - Columns to include (from the column picker)
 - If saved successfully, show a green snack bar
 - Message: Saved Filter saved successfully.
 - Close the modal.
 - If it failed to save, show a red error snack bar
 - Message: Failed to save Saved Filter. Try again.
 - Do not close the modal.
- When the user clicks Cancel
 - Close the modal without saving.
- If the user navigates away before clicking the Save Filter button on the modal, consider them to have clicked Cancel

Design

Additional Information

- The name field has no restrictions other than min and max length.
- No maximum number of filters that can be saved per account
- Applies to Desktop only

F1.2 Using Saved Filters as Reports

F1.2.1 Viewing existing Saved Filters

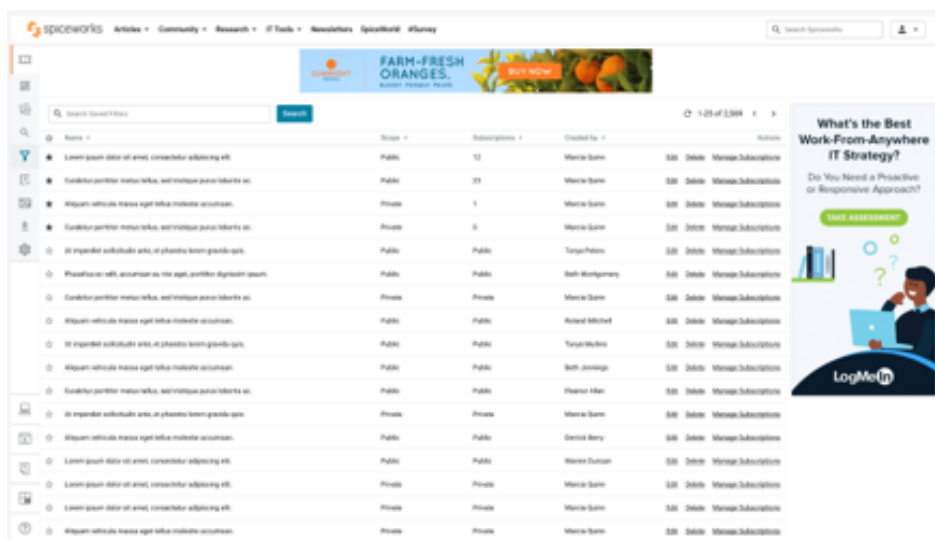

User Story

- As a Tech or Manager, I want to see a list of my private and any public Saved Filters on the account so that I can easily find and run them.
- As an Admin, I want to see a list of all private and public Saved Filters on the account so that I can easily find and run them and manage the account.

Acceptance Criteria

- Add a Saved Filters option on the left nav
 - When the user clicks on the Saved Filters option on the left nav
 - If the user is an admin, show all private and public Saved Filters
 - If the user is a tech or manager, show all private Saved Filters belonging to that user
 - Show Name, Public, and Created by fields
 - Sort alphabetically by Name by default, but all columns are sortable
 - Use pagination with 50 per page
 - If no Saved Filters exist
 - Show Message: No Saved Filters found.

Design

Mobile design pending

Additional Information

- Applies to both desktop and mobile.
- Action links have additional rules, see Edit, Delete, and Feature 2 for Manage Subscriptions

F1.2.2 Searching for Saved Filters

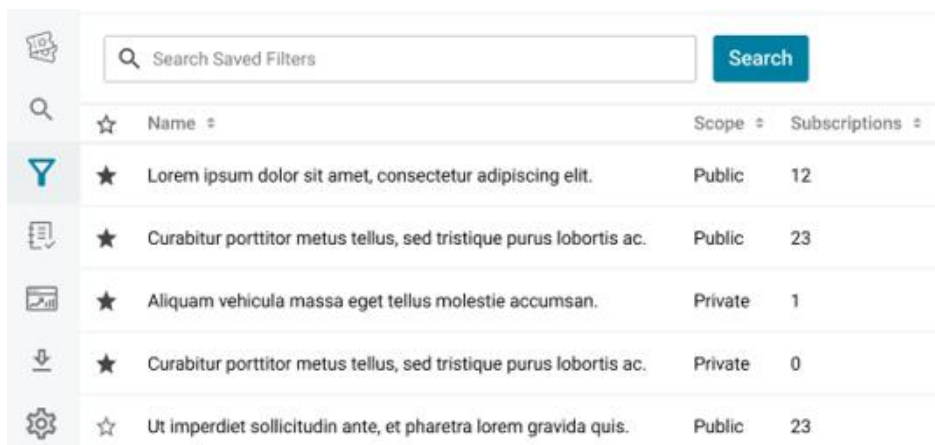

User Story

As a user, I want to be able to search the Saved Filters page to more easily find the filter I'm looking for.

Acceptance Criteria

- On the Saved Filters Page
 - Add a simple search text box and a Search button
 - Return only the Saved Filters where the Name matches the entered Search term.
 - Single Words: This will match on the complete word. If you want to do a partial search, you will need to use wildcards.
 - Multiple Words: Use AND (e.g., WordA AND WordB) to find tickets containing all terms, or OR to find one or the other.
 - Exact Phrases: Wrap your search in double quotes (e.g., "search phrase").
 - Wildcards: Use * for partial matches. For example, abc* finds words starting with those letters, while *abc* finds words containing them, and *abc finds words ending in those letters.
 - Smart Matching: The system uses “stemming” to find related words. Searching for “crash” will automatically include results for “crashing” or “crashed”.
 - Case Sensitivity: Search is generally case-insensitive but operators like AND and OR must be capitalized.
 - If no Saved Filters returned
 - Show Message: No Saved Filters found.

Design

☆	Name	Scope	Subscriptions
★	Lorem ipsum dolor sit amet, consectetur adipiscing elit.	Public	12
★	Curabitur porttitor metus tellus, sed tristique purus lobortis ac.	Public	23
★	Aliquam vehicula massa eget tellus molestie accumsan.	Private	1
★	Curabitur porttitor metus tellus, sed tristique purus lobortis ac.	Private	0
★	Ut imperdiet sollicitudin ante, et pharetra lorem gravida quis.	Public	23

Mobile design pending

Additional Information

- Applies to both desktop and mobile.

F1.2.3 Viewing Saved Filter Results

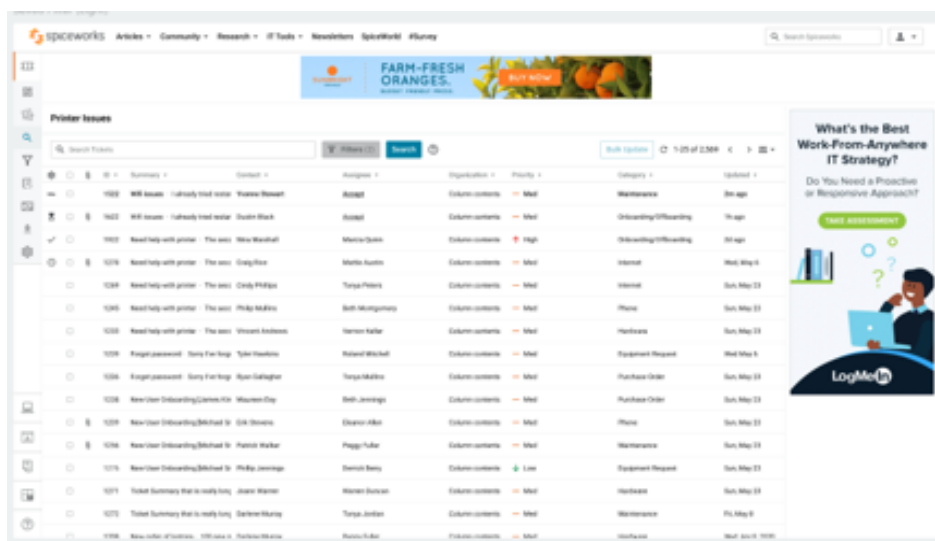

User Story

- As a CHD user, when I view an existing Saved Filter, I want to see the results and work with those tickets, as I can on the Advanced Search page.

Acceptance Criteria

- When a user clicks on a Saved Filter in the Saved Filters list, they are taken to the Filter Results Page
 - The name of the Saved Filter is displayed
 - Text and Filter criteria are populated
 - If a filter value is no longer available, that filter should be ignored. This is the current behavior when reloading the Advanced Search page with query string parameters.
 - Desktop only: The columns shown are those that match the columns to include for that filter
 - Column picker correctly shows the fields included for the filter
 - Results of the filter are shown in the grid
 - The user's ticket visibility permissions still apply here.
 - Relative date filters should be recalculated from the current datetime each time the Saved Filter is viewed
 - The user should be able to interact with the returned tickets in the same way as they can on the Advanced Search page for their platform.
 - If no results are found
 - Message: No tickets found.

Design

Mobile design pending

Additional Information

- Applies to both desktop and mobile, except for the columns, which have a fixed layout on mobile and cannot be selected.

F1.3 Editing Saved Filters

F1.3.1 Updating Saved Filter Criteria and Save as a New Saved Filter

User Story

- As a CHD user on the Filter Results Page, I want to adjust the filter/search criteria and either update the existing filter or save it as a new one.

Acceptance Criteria

- On a Filter Results Page for Desktop only
 - Show a Save Filter button with the option for Save as New
 - When the user clicks on the Save as New Filter button
 - The user should see the same modal as when saving an initial filter
 - When the user clicks on the Save button, the existing filter information should be updated
 - Text search term
 - Filter criteria
 - Columns to include
 - Updated Date
 - If the user updates the columns via the column picker, the filter columns should not be updated in the database for that Saved Filter unless the Save button is clicked.

Design

Printer Issues

Search Tickets						Filters (3)	Search	?	Save Filter	▼

							Column contents			—

Additional Information

- Applies only to desktop.

F1.3.2 Renaming and Changing Saved Filter Scope

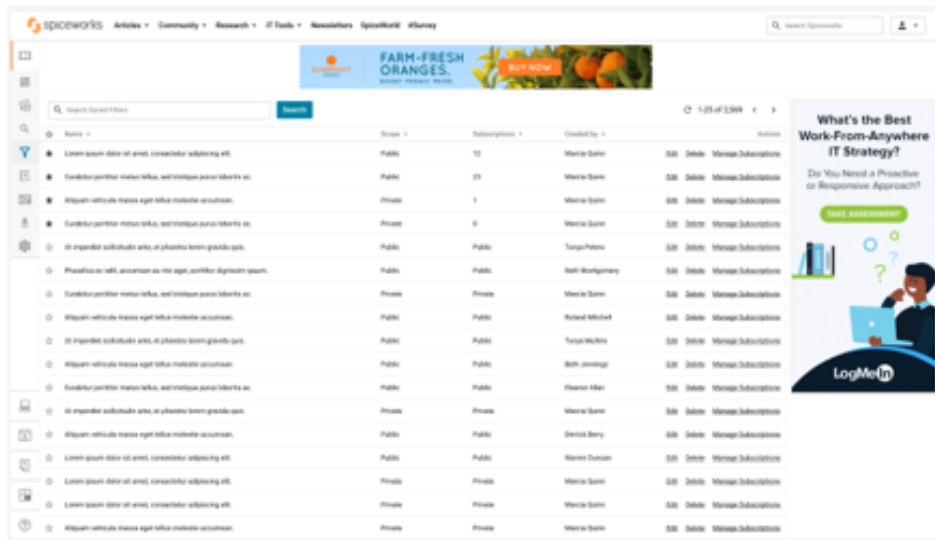

User Stories

- As a CHD user, I want to rename my private Saved Filters on the Saved Filters page.
- As a CHD admin, I want to rename public Saved Filters on the Saved Filters page.
- As a CHD user, I want to convert my private Saved Filter to a public one so I can share useful filters with the rest of the team.
- As a CHD admin, I want to convert a public Saved Filter into one owned by the original creator, provided the original creator is still an active employee, so that any public Saved Filters accidentally created can be returned to private and keep the list more manageable.

Acceptance Criteria

- On the Saved Filters list page, add an Edit link
 - The edit link is visible for all users' private Saved Filters
 - The edit link is visible for public Saved Filters only if the user has the role = admin
 - When the user clicks the edit link, a modal appears
 - Name
 - Scope
 - If the filter is currently private, the toggle is enabled for all roles
 - If the filter is currently public, the toggle is only enabled if the user role = admin and the original creator of the Saved Filter is still an active employee
 - Buttons: Cancel, Update Saved Filter
 - Validation Requirements
 - The name field must be unique within the context of the CHD account
 - Trim any leading or trailing white space characters before testing for uniqueness
 - Validation Message: Saved Filter name must be unique.
 - The name field must be populated (min = 1, max = 50)
 - Validation Message: Saved Filter name is required.
 - Update Saved Filter
 - The Update Saved Filter button is only enabled when the validation requirements are met.
 - When the user clicks the Update Saved Filter button
 - If saved successfully, show a green snack bar
 - Message: Saved Filter updated successfully.
 - Close the modal.
 - If it failed to save, show a red error snack bar
 - Message: Failed to update Saved Filter. Try again.
 - Do not close the modal.
 - When the user clicks Cancel
 - Close the modal without saving.

Design

Additional Information

- If the creator of a public filter is no longer an employee and the filter is no longer required to be public, the admin can delete it. There is no requirement to change the creator / assign a new owner
- Applies to Desktop only

F1.4 Favorite Saved Filters

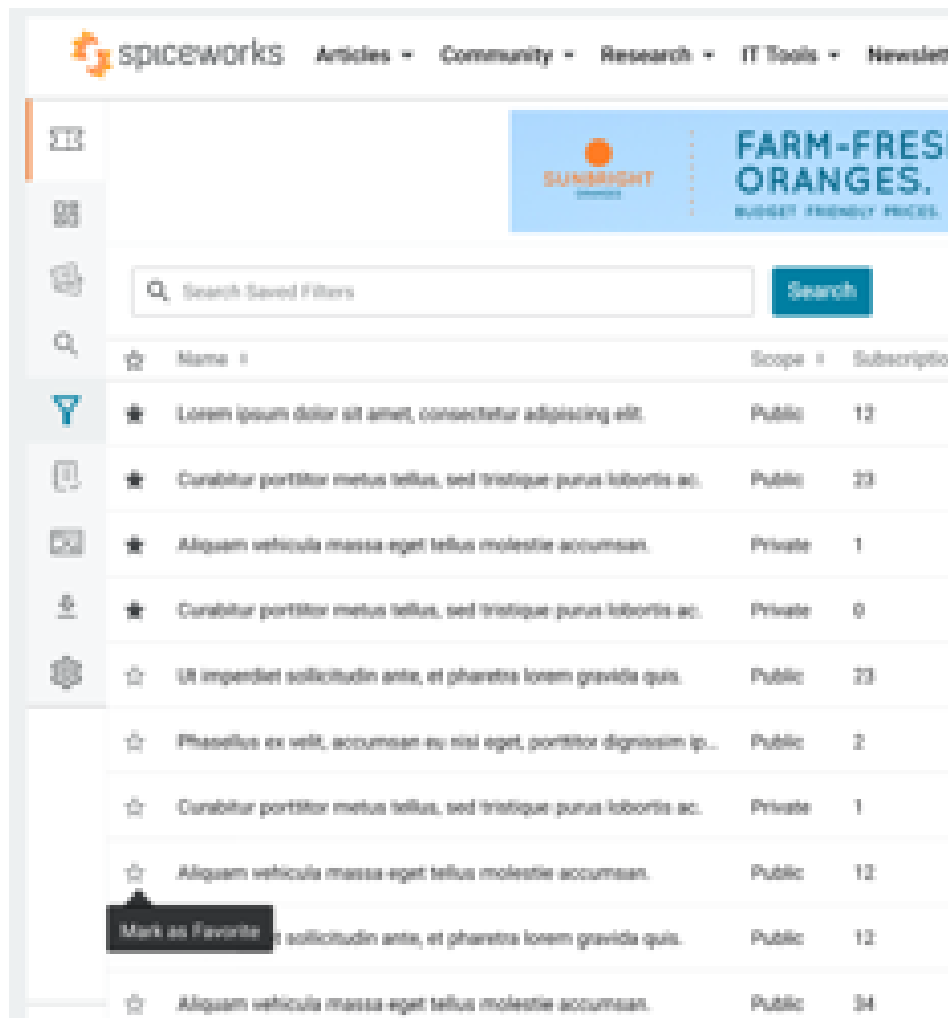

User Story

- As a CHD user, I want to be able to mark specific filters as favorites and have them show up at the top of the list so that I can easily find them

Acceptance Criteria

- On the Saved Filters list page, add a “Favorite” column
 - Show as a favorite if the user has marked that Saved Filter as a favorite
 - The user can toggle a Saved Filter as a favorite from this view
 - When the user toggles the favorite selector
 - If saved successfully, show a green snack bar
 - Message: Favorite updated successfully.
 - If it failed to save, show a red error snack bar
 - Message: Failed to update Favorite. Try again.

Design

Additional Information

- Applies to Desktop only

F1.5 Deleting Saved Filters

User Stories

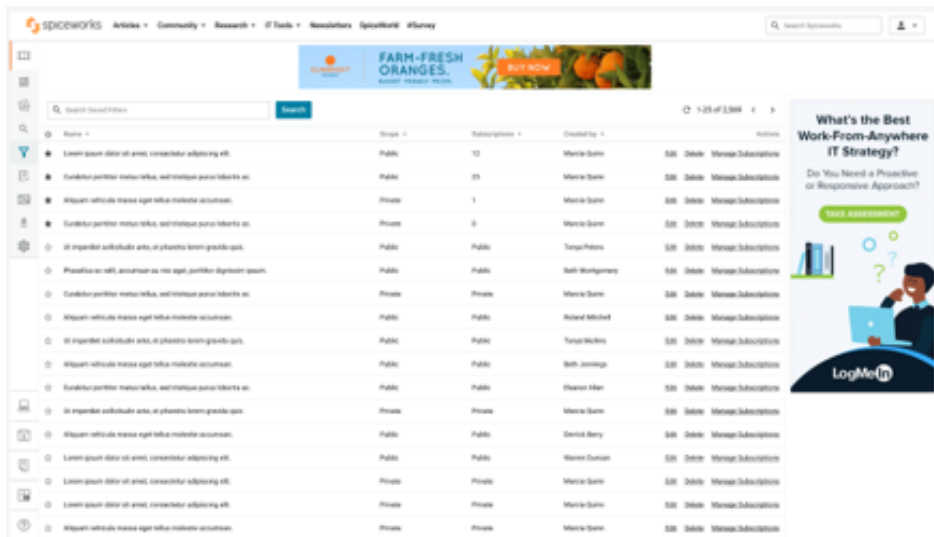

- As a CHD user, I want to delete my private Saved Filters.
- As a CHD admin, I want to delete public Saved Filters.

Acceptance Criteria

- On the Saved Filters page, add a delete link
 - For tech and managers, the delete link is visible for their own Saved Filters
 - For admins, the delete link is visible for all private and public Saved Filters
 - When the user clicks on the delete link
 - Show a prompt confirming the deletion

- Title: Delete Saved Filter?
- Message: Are you sure you want to delete this saved filter <Name>?
- Buttons: Cancel, Delete
- If the user clicks Delete
 - Delete the Saved Filter and any favorites
 - If deleted successfully, show a green snack bar
 - Message: Saved Filter deleted successfully.
 - Close the modal.
 - If it failed to delete, show a red error snack bar
 - Message: Failed to delete Saved Filter. Try again.
 - Do not close the modal.
- If the user clicks Cancel
 - Close the prompt.

Design

Additional Information

- Applies to Desktop only
- See Feature 2 for additional deletion requirements related to Subscriptions.

F1.6 Advanced Search Page Column Picker

User Story

As a user, I want to pick the columns for the tickets grid independently from the Advanced Search results grid

Acceptance Criteria

- When the user loads the Advanced Search page, show the columns they have previously selected for the Advanced Search page using its column picker
 - If no information is stored for their preferences, select all columns by default
- When the columns are adjusted via the column picker on the Advanced Search, save that information so it can be reused later

Design N/A

Additional Information

- Currently, the same local storage information is used for both the tickets and the Advanced Search pages.
- No data migration is required for existing users
- Applies to Desktop only, the column pickers do not appear on mobile.

Non-Functional Requirements

The following non-functional requirements should be considered for Saved Filters.

- Performance: Saved Filters must not materially degrade the performance of the Advanced Search page, Saved Filters list page, Tickets Grid, or core CHD workflows for other users.
- Page load performance: The Saved Filters list page should load within the existing performance expectations for CHD list pages, including when an account has a large number of Saved Filters.
- Search performance: Searching, sorting, and paginating Saved Filters should return results within the existing performance expectations for CHD list pages.
- Export performance: Exports from Advanced Search and Saved Filter results should follow the same export generation performance expectations as the current Reports export functionality. This feature does not include speed improvements to the existing export process.
- Scalability: The system must support accounts with no defined limit on the number of Saved Filters. Engineering should monitor and manage database performance, indexing, pagination, and query performance to ensure large accounts remain usable.
- Permission enforcement: Ticket visibility permissions must be enforced server-side whenever Saved Filter results are viewed or exported. A Saved Filter must not allow a user to view or export tickets they would not otherwise have permission to access.
- Access control: Create, edit, delete, public/private scope changes, favorites, and exports must be enforced server-side, based on the role and ownership rules defined in the functional requirements.
- Account isolation: Saved Filters, favorites, column preferences, exports, logs, and related metadata must remain isolated to the correct CHD account. No account should be able to access another account's Saved Filter data or exported results.
- Concurrency: Where two users or browser sessions update the same Saved Filter, the existing CHD "last saved wins" pattern applies, and the final saved state must remain valid and internally consistent.

- Export reliability: If an export from Advanced Search or Saved Filter results fails, the failure should be handled consistently with the existing Reports export mechanism, and enough information should be available for support to troubleshoot the issue.
 - Observability: The system must provide sufficient database records and Datadog logs for support and engineering teams to troubleshoot Saved Filter creation, updates, deletion, scope changes, favorite changes, search execution, result loading, and export issues.
 - Feature compatibility: Existing Advanced Search URL bookmarking behavior must continue to work. Saved Filters must not break existing query-string-parameter behavior in Advanced Search.
 - Browser and device compatibility: Saved Filters and related Advanced Search changes must work in the browsers and device types currently supported by CHD. Where mobile support is included by design, the same permission, data integrity, and reliability requirements apply.
-

Feature 2: Saved Filter Subscriptions: Scope and High-Level Features

This is dependent on feature 1

Standards

- Default behavior for modals/prompts: Clicking outside the modal does not close the modal.
- GA click tracking: Unique class names added to all buttons and links to enable GA click tracking using the agreed naming convention
- Datadog logs: Relevant Datadog logs added for all actions / API calls with the correct level to aid troubleshooting and debugging.
- User Concurrency: The current pattern is last saved wins.
- Feature Flipper: All Subscription functionality should be controlled by a single feature flipper, utilizing the option to enable it for specific accounts only. When the flipper is off or the account is not specified, all Subscription functionality should be hidden. This allows for a separation between release and launch.

Assumptions

- Unless otherwise specified, 'user' refers to Admins, as only Admins can manage Saved Filter Subscriptions
- Subscriptions are only available to admins
- Subscriptions are only available on Premium plan accounts.
- Subscriptions can only be managed on desktop and not on mobile.

In-Scope Features

F2.1 Managing Subscriptions for a Saved Filter

F2.1.1 Manage Subscriptions Page

User Story

As an admin, I want an easy way to manage subscriptions for a specific filter so I can add new subscriptions and edit or delete existing ones.

Acceptance Criteria

- If the user is an admin and on a Premium plan on the Saved Filters page for Desktop only
 - Add a link for Manage Subscriptions
 - Add a Subscriptions column that gives the number of subscriptions for that Saved Filter.
 - When the user clicks on the Manage Subscriptions link, they are redirected to the Manage Subscriptions page for that specific Saved Filter
 - Show the following information
 - Recipients
 - Format
 - Schedule
 - Interval
 - Daily
 - Show as “Daily”
 - Days per week
 - Show as “Mon / Tue / Wed / Thu / Fri / Sat / Sun” (delete days as needed)
 - Days per month
 - Show as “1st @ <time>” or “1st <day>”
 - Time
 - Last Run Time
 - If the subscription has not yet run, do not show anything in the field
 - Next Run Time
 - If no Subscriptions exist
 - Message: No Subscriptions
 - If a manager/tech on a premium account goes directly to this page, then redirect them to the 403 no permission page
 - If the user is a manager/tech and on a Premium plan on the Saved Filters page for Desktop only
 - Do not show the Manage Subscriptions link

Design

User Story

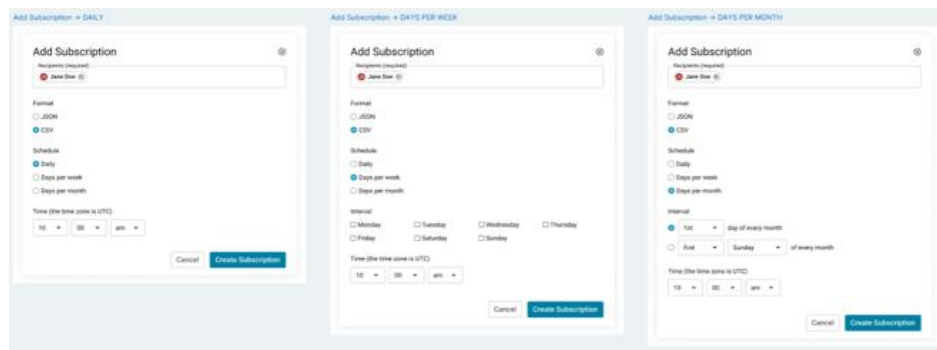

- As an admin, I want to subscribe to a Filter so that I get an updated export in my inbox on the schedule that I define.

Acceptance Criteria

- On the Saved Filter Manage Subscriptions page
 - Add an Add subscription button
 - When the user clicks Add subscription, show a modal
 - Recipients
 - If the filter is a private filter
 - Current user only
 - Default: Current user
 - If the filter is a public filter
 - Multi-select list of all active admins
 - Default: Current user
 - Format
 - JSON
 - CSV (default)
 - Schedule
 - Daily (default)
 - Days per week
 - Days per month
 - Interval
 - When Days per week is selected
 - Checklist for days of the week
 - Default: None checked
 - When Days per month is selected
 - Select between Day of the Month plus last or 1st/2nd/3rd/4th/last Day of Week
 - Default: Day of the Month
 - Default: 1st
 - Time
 - Default: randomize the default time to prevent too many subscriptions from running at the same time
 - Add a label to tell the user that the timezone is UTC
 - Buttons: Cancel, Create Subscription
 - Validation Requirements
 - If Days per week is selected
 - At least 1 day must be selected
 - Validation Message: At least 1 day is required.
 - Create Subscription Button
 - The Create Subscription button is only enabled when the validation requirements are met.
 - When the Create Subscription button is clicked

- If saved successfully, show a green snack bar
 - Message: Subscription created successfully.
 - Close the modal.
 - Show the newly added subscription on the Saved Filter Manage Subscriptions page with the Next Run Time populated
- If it failed to save, show a red error snack bar
 - Message: Failed to create Subscription. Try again.
 - Do not close the modal.

Design

Additional Information

- No max number of recipients; the number of active Employees on an account provides a natural limit. This may be revisited in the future.
- Only Premium Plan admins can access this page
- Saved Filter Manage Subscriptions page is only available on Desktop

F2.1.3 Editing existing Subscriptions

User Story

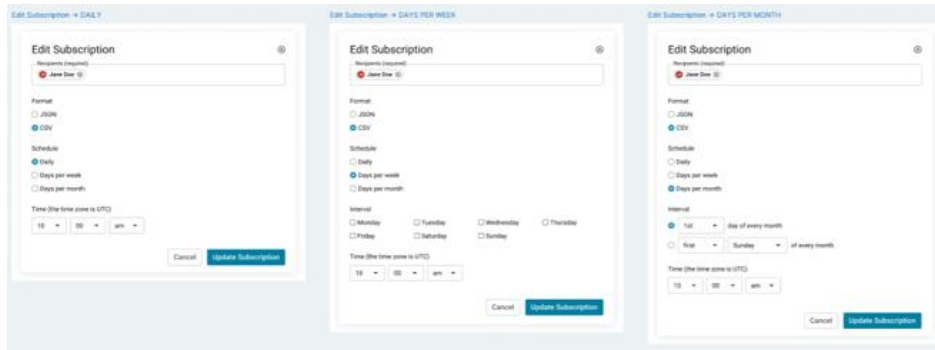

As an admin, I want to edit an existing Saved Filter Subscription

Acceptance Criteria

- On the Saved Filter Manage Subscriptions page
 - Add an edit link for each subscription
 - The edit link is visible for subscriptions on the admin's private Saved Filters and on public Saved Filters.
 - When the user clicks the edit link, a modal appears
 - Recipients
 - If the filter is a private filter
 - Current user only
 - If the filter is a public filter

- Multi-select list of all active admins
- Format
 - JSON
 - CSV
- Schedule
 - Daily
 - Days per week
 - Days per month
- Interval
 - When Days per week is selected
 - Checklist for days of the week
 - Default: None checked
 - When Days per month is selected
 - Select between Day of the Month plus last or 1st/2nd/3rd/4th/last Day of Week
 - Default: Day of the Month
 - Default: 1st
- Time
 - Default: randomize the default time to prevent too many subscriptions from running at the same time
 - Add a label to tell the user that the timezone is UTC
- Buttons: Cancel, Update Subscription
- Validation Requirements
 - If Days per week is selected
 - At least 1 day must be selected
 - Validation Message: At least 1 day is required.
- Update Subscription Button
 - The Update Subscription button is only enabled when the validation requirements are met.
- When the user clicks Update Subscription
 - If saved successfully, show a green snack bar
 - Message: Subscription updated successfully.
 - Close the modal.
 - Show the updated subscription information on the Saved Filter Manage Subscriptions page, with the Next Run Time populated
 - If it failed to save, show a red error snack bar
 - Message: Failed to update Subscription. Try again.
 - Do not close the modal.
- When the user clicks Cancel
 - Close the modal without saving.

Design

Additional Information

- Only Premium Plan admins can access this page
- Saved Filter Manage Subscriptions page is only available on Desktop

F2.1.4 Deleting Saved Filter Subscriptions

User Story

As an admin, I want to delete the subscription for a Saved Filter

Acceptance Criteria

- On the Saved Filter Manage Subscriptions page
 - Add a delete link for each subscription
 - The delete link is visible for subscriptions on the admin's private Saved Filters and on public Saved Filters.
 - When the user clicks on the delete link
 - Show a prompt confirming the deletion
 - Title: Delete Subscription?
 - Message: Are you sure you want to delete this Subscription?
 - Buttons: Cancel, Delete
 - If the user clicks Delete
 - If deleted successfully, show a green snack bar
 - Message: Subscription deleted successfully.
 - If it failed to delete, show a red error snack bar
 - Message: Failed to delete subscription. Try again.
 - If the user clicks Cancel
 - Close the prompt.

Design N/A

Additional Information

- Only Premium Plan admins can access this page
- Saved Filter Manage Subscriptions page is only available on Desktop

F2.2 Deleting Saved Filters

User Story

As a user, when I delete a Saved Filter, I expect all subscriptions to be deleted after being prompted that subscriptions will also be deleted.

Acceptance Criteria

- When deleting a Saved Filter
 - If the user is on a Premium plan and the Saved Filter has subscriptions
 - Show a prompt confirming the deletion
 - Title: Delete Saved Filter?
 - Message: Are you sure you want to delete this saved filter <Name>? Any subscriptions for this saved filter will also be deleted.
 - Buttons: Cancel, Delete
 - If the user clicks Delete
 - Delete the Saved Filters, any favorites, and Subscriptions
 - If deleted successfully, show a green snack bar
 - Message: Saved Filter deleted successfully.
 - Close the modal.
 - If it failed to delete, show a red error snack bar
 - Message: Failed to delete Saved Filter. Try again.
 - Do not close the modal.
 - If the user is on a Core plan
 - Show the existing prompt
 - Delete any Subscriptions that may have been set up when they were on a Premium plan, along with the Saved Filter and any favorites.

Design N/A

Additional Information

- Only additions to the existing functionality are included here; existing functionality must continue to work as expected.
- Core plan users will not be prompted
- Only Admins can have subscriptions.

F2.3 Running Subscriptions

User Story

As an admin with a Saved Filter Subscription, I want the export to run at the required time and send me an email with a link to download the file.

Acceptance Criteria

- When the scheduled time occurs
 - If the account is still on the Premium plan
 - On successful completion
 - Each configured recipient who is still an active admin receives the export completed email with a link to the data, as they would when manually exporting the Saved Filter results.
<https://spicey.atlassian.net/wiki/spaces/ZPE/pages/59271577601/Outcome+Reporting+Improvements+In+Review#Exporting-Advanced-Search-%2F-Filter-Results>
 - The last time run time and next run time for the subscription are updated
 - If the subscription uses Day of Month and selects a specific day, and the month doesn't have that many days, the subscription should run on the last day of the month rather than not run at all.
 - If a subscription fails, the system should retry once.
 - If the retry also fails, the job should be marked as failed, the failure reason should be recorded, and the next run time subscription should still be calculated.
 - If the account has been downgraded to a Core plan
 - See Downgrading to Core
 - Add suitable logging and data for troubleshooting and audit purposes.

Design

Additional Information

- The subscription is acting like an automatic way to click on the export option, and should follow the same behavior with regards to
 - Email template
 - File creation
- No requirement to notify the recipients if the subscription fails
- Only admins can receive subscriptions, so the same export email and file can be sent to everyone in a single email, ensuring everyone receives the same data.

F2.4 Converting a Public Saved Filter with Subscription(s) to a Private Filter

User Story

As an admin, I want to be prevented from converting a public Saved Filter with Subscriptions to a Private Filter unless the only recipients on the Subscriptions are the original creator of the Saved Filter.

Acceptance Criteria

- On the Edit Saved Filter modal
 - If the filter is currently public, the toggle is only enabled
 - if the user role = admin
 - AND the original creator of the Saved Filter is still an active employee
 - AND the only recipient of any Subscriptions is the original creator.

Design

Additional Information

- Only additions to the existing functionality are included here; existing functionality must continue to work as expected.
- Subscriptions are only active for Premium Plan accounts, even if they exist due to an account downgrade. The subscription check should be applied to both Core and Premium plan accounts to protect the data integrity.

F2.5 Updating the criteria for a Saved Filter with Subscriptions

User Story

As an admin, when a Saved Filter criterion is updated, I expect that the next time a subscription runs, it is using the updated criteria.

Acceptance Criteria

- When a subscription runs, it uses the latest Saved Filter criterion

Design N/A

Additional Information

- Only additions to the existing functionality are included here; existing functionality must continue to work as expected.

F2.6 Deactivating Employees

User Story

- As an admin, when an employee is deactivated, I want their Saved Filter Subscriptions to be deleted

Acceptance Criteria

- When an employee is deactivated, the following additional actions are taken
 - Any subscriptions for private Saved Filters are deleted

- Any subscriptions for public Saved Filters where the user is the only recipient are deleted
- The user is removed from the recipient list of any public Saved Filters Subscriptions containing more than 1 recipient

Design N/A

Additional Information

- Only additions to the existing functionality are included here; existing functionality must continue to work as expected.

F2.10 Data and Monitoring

F2.10.1 Troubleshooting Logs

User Story

- As a support team member, I want to view logs to troubleshoot user complaints and monitor system performance for Saved Filter Subscriptions

Acceptance Criteria

- Provide sufficient operational visibility for support teams to investigate user issues with Saved Filter Subscriptions and understand overall system health
 - Support should be able to correlate a user-reported issue to the relevant account, user, Saved Filter Subscription, and execution attempt.
 - Support should be able to understand the lifecycle and outcome of each Saved Filter Subscription run, including whether it was waiting to run, in progress, retried, completed successfully, skipped, or failed.
 - Where a run fails or is skipped, support should have enough context to identify the likely cause, assess whether retry or escalation is needed, and explain the outcome to the user.
 - Support should be able to confirm whether expected recipient notifications were attempted and whether they were successfully sent.
 - Support should have visibility of any queue or processing constraints that could affect scheduled exports, such as backlog, concurrency, repeated failures, or delays.
- Provide appropriate alerting for failures or degraded behavior that may require support or engineering investigation.
- Provide troubleshooting guidance or support documentation, so support teams can interpret the available data and respond consistently to user queries.

Design N/A

Additional Information

- The support team has access to the database and Datadog logs, no UI is required.

Out of Scope

- Separate page to manage all Subscriptions

Non-Functional Requirements

The following non-functional requirements should be considered for Saved Filter Subscriptions

- **Performance:** Saved Filter Subscriptions must not materially degrade the performance of the Saved Filters page, the Manage Subscriptions page, or core CHD workflows for other users.
- **Execution timing:** A scheduled subscription should be queued and started as close as reasonably possible to the configured schedule time.
- **Export generation time:** Scheduled subscription exports should follow the same export generation performance expectations as manually triggered exports from Advanced Search.
- **Scalability and load management:** The system must support multiple subscriptions running across accounts without overloading export processing. Jobs may be queued, throttled, or rate-limited where required to protect overall system health.
- **Reliability:** Saved Filter Subscriptions must survive deployments, service restarts, and failovers without being lost, duplicated, or run unexpectedly.
- **Data integrity:** A scheduled subscription export must produce the same output as a manual export of the same Saved Filter at the same point in time, subject to the recipient's ticket visibility permissions.
- **Permission enforcement:** Ticket visibility permissions must be enforced server-side when generating subscription exports. A subscription must not allow a recipient to receive tickets they would not otherwise have permission to access.
- **Schedule accuracy:** Last Run Time and Next Run Time should accurately reflect the latest successful run and the next scheduled run. Any delays, skipped runs, retries, or failures should not result in misleading schedule information being displayed.
- **Security and permissions:** Subscription creation, editing, deletion, and execution must be enforced server-side and restricted to admins on accounts entitled to use the feature. Only admins can be added as recipients.
- **Account isolation:** Saved Filter Subscriptions, generated export files, logs, and recipient notifications must remain isolated to the correct CHD account. No account should be able to access another account's subscriptions, export output, or execution data.
- **Notification reliability:** Export completion emails generated by subscriptions should use the existing export email mechanism and should be logged so support can confirm whether notifications were attempted and sent successfully.
- **Concurrency:** Where two admins update the same subscription simultaneously, the existing CHD "last saved wins" pattern applies, and the final saved state must remain valid and internally consistent.

- **Observability:** The system must provide sufficient database records and Datadog logs for support and engineering teams to troubleshoot subscription creation, editing, deletion, execution, retries, skipped runs, failures, and email notification issues.
 - **Alerting:** Appropriate alerts should be configured for degraded behavior, such as repeated subscription failures, abnormal queue delays, or processing backlogs.
